

product brief

Eedo Unify provides the ability to effectively and efficiently manage knowledge across multiple content repositories, including one or several ForceTen environments, enabling complete control over their stored taxonomies, metadata, objects and users. With Eedo Unify, metadata and taxonomy can be applied to knowledge across an organization, allowing organizations to control the structure of their content.

In addition, Eedo Unify is a powerful tool that enables users to search and access knowledge across multiple repositories including JSR-170 repositories. The result is improved productivity and a reduction in the time and cost associated with training and knowledge management.
